SEARCH REQUEST FORM

6-214

Requestor's Shella Hirff Serial Number: 08/23/565

Date: 10/9/97 Phone: 305-7866 Art Unit: 1806

Search Topic:

Please write a detailed statement of search topic. Describe specifically as possible the subject matter to be searched. Define any terms that may have a special meaning. Give examples or relevant citations, authors keywords, etc., if known. For sequences, please attach a copy of the sequence. You may include a copy of the broadest and/or most relevant claim(s).

Nucleic acid coding for a tumour rejection antigen precursor - is used for developing prods. for diagnosis or treatment of expression related disorders, partic. melanoma Claim 5; Page 14; 26pp; English.

This sequence represents the tumour rejection antigen precursor which is processed to a tumour rejection antigen presented by HLA-A2 molecules. The tumour rejection antigen presented to tyrosinase. The cDNA encoding this sequence was isolated from the melanoma cell line, LB-39-MEL. The tumour rejection antigen may be used for diagnosis or in vaccines or for therapy of disorders characterised by the expression in vaccines or for therapy of disorders characterised by the expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

DNA encoding melanoma antigens recognised by T-lymphocytes - a vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Claim 11; Page 117: 184pp; English.

The melanoma antigen (MART-1) is produced by recombinant DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Example 5: Page 105: 184pp; English.

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 an immunogenic peptide based on the melanoma antigen (MART-1) (see R8421). The peptides are used in mediaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MARR-1 from a sample, the detection of which is
methods, i.e. preferably using a baculovirus vector for expression in insect cell cultures. MART-1 protein is a source of immunogenic peptides (see R84196 for peptide M9-2) which are optionally modified (see R84783-R84800) and used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                indicative of a disease state (melanoma or metastatic melanoma).

DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.
Example 5; Page 105; 184pp; English.
R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MARR-1 from a sample, the detection of which is

In immunogenic peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its manuagenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Modified MART-1 melanoma antigen immunogenic peptide M9-2-1W.
MART-1, M9-2; melanoma antigen recognised by T-cells; melanoma,
metastatic melanoma; tumour-associated antigen;
jemunogenic peptide; diagnosis; prognosis; prophylaxis;

DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Example 5: Page 105: 184pp; English.

EXAMPLE 5: Page 105: 184pp; English.

EXAMPLE 5: Peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rawakami Y, Rosenberg SA;

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    indicative of a disease state (melanoma or metastatic melanoma).

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S

Mean 21.480; Variance 27.992; scale 0.767 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Furutani, M.; Arii, S.; Higashitsuji, H.; Mise, M.; Fukumoto, M.; Takano, S.; Nakayama, H.; Imamura, M.; Fujita, J.
-Biochem. J. (1995) 311:203-208
Reduced expression of kan-1 (encoding putative bile acid-CoA-amino acid N-acyltransferase) mRNA in livers of rats after partial hepatectomy and during sepsis.
Harms, U.; Thauer, R.K.

Eur. J. Biochem. (1996) 235:653-659

Methylcobalamin:coenzyme M methyltransferase isoenzymes MtaA
and MtbA from Methanosarcina barkeri. Cloning, sequencing
and differential transcription of the encoding genes, and
functional overexpression of the mtaA gene in Escherichia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Two beta-glycanase genes are clustered in Bacillus polymyxa: molecular cloning, expression, and sequence analysis of genes encoding a xylanase and an endo-beta-(1,3)-(1,

#contents annotation; physicochemical properties
MENT Gene D protein is a major component of the phage head and serves to
stabilize the head during DNA packaging. There are approximately
420 copies of protein D per mature phage.
                                                                                                                                                                                                                                                                    ö

AL BACTERIOL. 175:6150-6157(1993).

J. BACTERIOL. 175:6150-6157(1993).

- 1- FUNCTION: BIFUNCTIONAL BIVENER RESPONSIBLE FOR THE ACETYLATION OF GLC.N-1-P TO GIVE GLCNAC.-1-P AND THE SYNTHESIS OF UDP-GLCNAC.

- CATALYTIC ACTIVITY: UTP + N-ACETYL-ALPHA-D-GLUCOSAMINE.

- I-PHORSHATE - PYROPHORSHATE + UDP-N-ACETYL-D-GLUCOSAMINE.

- I-PHORSHATE: PEPTIDOGIVCAN AND LIPPOPLACETYL-D-GLUCOSAMINE.

- CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN DUE TO A FRAMESHIET THAT CREATES TWO ORFS.

- I- SIMILARITY: BELONGS TO THE CYSE/LACA/LPXA/NODL FAMILY OF ACETYLTRANSFERASES. COMPOSED OF WULTTPLE REPEATS OF [LIV]-G-X(4).

CHEN H.-C., WINTZ H., WEIL J.-H., PILLAY D.T.N.;
NUCLEIC ACIDS RES. 16:10372-10372(1988).
-!- FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON
GOSALBES M.J., PEREZ-GONZALEZ J.A., GONZALEZ R., NAVARRO A.;
J. BACTERIOL. 173:7705-7710(1991).
-!- FUNCTION: SHOWS XYLANASE ACTIVITY AS WELL AS ALPHA-L-
ARABINOPURANOSIDASE ACTIVITY.
-!- CATALYTIC ACTIVITY: ENDOHYDROLYSIS OF 1,4-BETA-D-XYLOSIDIC
LINKAGES IN XYLANS.
-!- PATHWAY: XYLAN DEGRADATION.
-!- STMILARITY: BELONGS TO FAMILY 43 OF GLYCOSYL HYDROLASES.

Nucleic acid coding for a tumour rejection antigen precursor - is
used for developing prods. for diagnosis or treatment of expression
related disorders, partic. melanoma
claim 5; Page 14; 26pp; English.

This sequence represents the tumour rejection antigen precursor which is
processed to a tumour rejection antigen presented by HLA-A2 molecules.
The tumour rejection antigen is not related to tyrosinase. The cDNA
encoding this sequence was isolated from the melanoma cell line,
LB-39 wEL. The tumour rejection antigen may be used for diagnosis or
in vaccines or for therapy of disorders characterised by the expression
of the tumour rejection antigen precursor, particularly melanoma.
                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Claim 11: Page 117: 184pp: English.

The melanoma antigen (MART-1) is produced by recombinant DNA methods, i.e. preferably using a baculovirus vector for expression in insect cell cultures. MART-1 protein is a source of immunogenic peptides (see R84196 for peptide M9-2) which are optionally modified (see R84783-R84800) and used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Immunogenic peptide M10-4 is a derivative of peptide M9-2 (R84196)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kawakami Y, Rosenberg SA; WPI; 95-382963/49. WPI; 95-382963/49. WPI SP-382963/49. WPI; 95-382963/49. Well and entigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NART-1 melanoma antigen immunogenic peptide M10-4.
MART-1 melanoma antigen immunogenic peptide M10-4.
MART-1; M10-4; melanoma antigen recognised by T-cells; melanoma;
immunogenic melanoma; tumour-associated antigen;
immunogenic peptide; diagnosis; prognosis; prophylaxis;
impunogenic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             20-APR-1996 (first entry)
MART-1 melanoma antigen immunogenic peptide M9-2.

Example 5: Page 105: 184pp; English.

R84783-800 are M9-2 peptides modified to improve immunogenic peptide based on the melanoma antigon (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).

DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Example 5; Page 105; 184pp; English.

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84121). The peptides are used in medicionements for the treatment or recognic modified.

Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Example 5: Page 105: 184pp; English.

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MARR-1 from a sample, the detection of which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               prevention (by immunization) of melanoma. Antibodies against Maranditis immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25-APR-1996 (first entry)
Modified MART-1 melanoma antigen immunogenic peptide M9-2-2M.
MART-1; M9-2; melanoma antigen recognised by T-cells; melanoma; metastatic melanoma; tumour associated antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

immunise animal against melanoma.
Example 5: Page 105: 184pp; English.
R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunisation) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               M9-2 1s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA, encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunist melanoma.

Example 5; Page 105; 184pp; English.

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         indicative of a disease state (melanoma or metastatic melanoma).

DNA encoding melanoma antigens recognised by T-lymphocytes - also
bectors, host cells and antibodies, used to detect, treat and
immunise animal against melanoma.

Example 5: Page 105: 184pp; English.

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is
an immunogenic peptide based on the melanoma antigen (MART-1) (see
R84212). The peptides are used in medicaments for the treatment or
                                                                                                                                                                                                                                                           ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma). Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. Mean 22.055; Variance 28.889; scale 0.763 Statistics:

NT This is a component of the enzyme complex that catalyzes 2,
6-dichlorophenolindophenol-dependent cleavage of acetoin into
acetate and acetaldehyde. The functional enzyme is a tetramer of
two alpha and two beta chains.

IFICATION #superfamily pyruvate dehydrogenase (lipoamide) alpha chain;
thiamine pyrophosphate-binding domain homology
heterotetramer; oxidoreductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              H+-transporting ATP synthase (EC 3.6.1.34) proteolipid chain - Sulfolobus acidocaldarius #formal_name Sulfolobus acidocaldarius 20-Dec-1989 #sequence_revision 20-Dec-1989 #text_change 23-Jun-1993

#MENT Gene D protein is a major component of the phage head and serves to
stabilize the head during DNA packaging. There are approximately
420 copies of protein D per mature phage.
                                                                                                                                                                   ö

Methylcobalamin:ocenzyme M methyltransferase isoenzymes Mtah

and MtbA from Methanosarcina barkeri. Cloning, sequencing

and differential transcription of the encoding genes, and

functional overexpression of the mtaA gene in Escherichia
                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Furttani, M.; Arii, S.; Higashitsuji, H.; Mise, M.; Fukumo M.; Takano, S.; Nakayama, H.; Imamura, M.; Fujita, J. Blochem. J. (1995) 311:203-208
Reduced expression of kan-1 (encoding putative bile acid-CoA-amino acid N-acyltransferase) mRNA in livers of rats after partial hepatectomy and during sepsis.
                                                                                                                                                                                                                                                      Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FLAGELLAR HOOK-ASSOCIATED PROTEIN 2 (HAP2) (FILAMENT CAP PROTEIN).
FLID OR FLEC OR FLAV.
ESCHERICHIA COLI.
PROKKRYOTA; GRACILICUTES; SCOTOBACTERIA; FACULTATIVELY ANAEROBIC RODS;
J. BACTERIOL. 175:6150-6157(1993).

-!- FUNCTION: BIFUNCTIONAL ENZYME RESPONSIBLE FOR THE ACETYLATION OF GLC-N-1-P TO GIVE GLCNAC-1-P AND THE SYNTHESIS OF UDP-GLCNAC.
-!- CATALYTIC ACTIVITY: UP+ N-ACETYL-ALPHA-D-GLUCOSAMINE.
-!- PHOSPHATE = PYROPHOSPHATE + UDP-N-ACETYL-D-GLUCOSAMINE.
-!- PATHWAY: PEPTIDOGLYCAN AND LIPOPOLYSACCHARIDE BIOSYNTHESIS.
-!- CAUTION: REF. 2 SEOUGHNCE DIFFERS FROM THAT SHOWN DUE TO A FRAMESHIFT THAT CREATES TWO OFFS.
-!- SIMILARITY: BELONGS TO THE CYSE/LACA/LDXA/NODL FAMILY OF ACETYLIFANDESES. COMPOSED OF MULTIPLE REPEATS OF [LIV]-G-X(4).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE OF 1-8 FROM N.A.

NUCLEIC ACIDS RES. 16:10372-10372(1988).

C -I- FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON GRADIENT ACROSS THE MEMBRANE COMBONENTS, CF(1) - THE CATALYTIC COME. AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE COME. AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE CC HAS THREE MAIN SUBGUITS: A. B AND C.

C -I- SUBCLILLAR LOCATION: CHLOROPLAST THYLAKOID MEMBRANE.

CC -I- SIMILARITY: BELONGS TO THE ATPASE EPSILON CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Mean 15.667; Variance 49.649; scale 0.316 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Nucleic acid coding for a tumour rejection antigen precursor - is used for developing prods. for diagnosis or treatment of expression related disorders, partic. melanoma (Claim 5; page 14; 26pp; English.

This sequence represents the tumour rejection antigen precursor which is processed to a tumour rejection antigen presented by HIA-A2 molecules. The tumour rejection antigen is not related to tyrosinase. The CDNA encoding this sequence was isolated from the melanoma cell line, LB-39-MEL. The tumour rejection antigen may be used for diagnosis or in vaccines or for therapy of disorders characterised by the expression of the tumour rejection antigen precursor, particularly melanoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding metanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Claim 11; Page 117; 184pp; English.

Claim 11; Page 117; 184pp; English.

The melanoma antigen (MART-1) is produced by recombinant DNA methods, 1.e. preferably using a baculovirus vector for expression in insect cell cultures. MART-1 protein is a source of immunogenic peptides (see R84196 for peptide M9-2) which are optionally modified (see R8439.R8480) and used in medicaments for the treatment or prevention (by immunization) of medicaments for the treatment or and its immunogenic peptides may be used in the detection and its immunogenic peptides may be used in the detection and its immunogenic peptides may be used in the detection and its indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Immunogenic peptide M9-2 is based on the melanoma antigen (MART-1) (see R84212). M9-2 may be modified to improve immunogenicity (see R84783-R84800) and used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 12; Page 12ž; 184pp; English.
Immunogenic peptide M10-3 is a derivative of peptide M9-2 (R84196)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors. Nost cells and antibodies, used to detect, treat and immunise animal against melanoma.

which is based on the melanoma antigen (MART-1) (see R84212).

May 2 may be modified to improve immunogenicity (see R84783-R84800) and used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma. Example 2: Page 72: 184pp; English.

Immunogenic peptide M9-3 is based on the melanoma antigen (MART-1) (see R84212). M9-3 may be modified to improve immunogenicity (see R84782) and used in medicaments (vaccines) for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding melanoma antigens recognised by T-lymphocytes - also

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           is

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides modified to medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is

DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Example 5: Page 105: 184pp; English.

Example 5: Page 105: 184pp; English.

Example 5: Poptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mol/gill region and any other nonessential region of the PV genome can be manipulated to produce the deletions and insertions by standard recombinant DNA techniques. Recombinants can be used for the prodn. of desired proteins. Antigens produced are useful in diagostic kits and as vaccines (claimed). also, the PV engineered to contain the genes for appropriate antigens also should have utility as a live vaccine.
                                                                                                                              Complete sequence of the pseudorables virus (PRV) gIII glycoprotein gene (noncoding strand)

EXAMPLE 5: Peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (PART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its munogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The inventors claim a recombinant vector comprising a DNA sequence coding for an immunoreactive and antigenic determinant of a Pseudorables virus protein. and a polypeptide having an immunoreactive and antigenic determinant of a Pseudorables virus protein. Vaccines contg. the polypeptide are obtd. economically and in large amits, for use in conferring protection against Sequence 479 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
